## Previewing your app using Mobile Roadie Connect

### How can I see what my app looks like before I submit it?

Though we do some previewing in the Design area of the CMS, these aren't completely accurate nor do they represent the experience your users will have inside of your apps.

Because of this, we've created free apps for iPhone, iPad, and Android that will allow you to preview your apps right on your own device to see them how your users will see them.

### How do I get Mobile Roadie Connect?

You can search for "Mobile Roadie Connect" within the iTunes App Store or Google Play Store on your device, or visit the links below:

- iPhone — <https://itunes.apple.com/app/id418665943?mt=8>
- iPad — <https://itunes.apple.com/us/app/mobile-roadie-connect-for/id529997945?mt=8>
- Android — [https://play.google.com/store/apps/details?id=com.mobileroadie.app\\_1219](https://play.google.com/store/apps/details?id=com.mobileroadie.app_1219)

Or, use the links from <http://mobileroadie.com/apps/mobileroadie>

## How do I use Mobile Roadie Connect?

Once you've downloaded the app, launch it, and you'll be prompted to log in with your Mobile Roadie account credentials.

Then, you'll be able to use your app just like any user would, even before you submit the app to the app stores. Try updating a piece of content in the CMS to see it update in Mobile Roadie Connect right away.

If you need to log out of the app, simply shake your device.

## What about custom work?

If we've done custom work for you that requires client-side changes to the app (such as a new section or new functionality), you'll need "ad hocs" from us to see those, and they won't be visible in the publicly available Mobile Roadie Connect preview app.
